

ALPS Introducing World's Fastest Linear Leak Tester at NPE 2015 (Booth W3083)

Milwaukee, WI March 2015

ALPS (Air Logic Power Systems, LLC) will be exhibiting the world's fastest linear leak tester for plastic containers at NPE 2015. The new eight-station Speed-Glider moving head machine is capable of speeds up to the 500 Bottles-Per-Minute (30,000 BPH) range for smaller container sizes.

ALPS has continued to grow and expand our Speed-Glider technology since its introduction in 2012 – 2, 3, 4, 5, 6, 7 and 8 station versions are now available. The Speed-Glider offers a high speed leak testing machine in a convenient linear format, with benefits including:

- Positive bottle handling
- Compact footprint and minimal change parts compared to rotary machines
- Ease of setup with only a single sensor in the testing area to verify bottle presence
- Attractive cost

Please visit ALPS in **Booth W3083**, where in addition to the Speed-Glider 8-station we will be exhibiting our NexGen Rotary technology; SC Linear high speed single-station unit; and the new MLT Trimmer Mount leak tester.

Please **Contact Us** if you would like to set up an appointment in the ALPS or ASB booth to review our latest plastic container leak testing technologies.

ALPS, 1745 S. 38th Street, Suite 100, Milwaukee, WI, USA 53215
