

**ALPS Introduces Updated, Lower Cost Version of Indexing Conveyor Leak Tester**  
Milwaukee, WI September 2013

**\*NEW\* SC linear leak tester**

**Market Leading Controls Interface**

**Fully Guided Setup Software**

Including both mechanical (gold) and leak test (blue) setup sequences

ALPS (Air Logic Power Systems, LLC) is pleased to announce new design updates to its market leading SS *Linear* single-station container leak tester product line, together with a base unit price reduction of 10-20% compared to the previous models.

The new **SC Linear** indexing conveyor leak tester includes the following updates and improvements:

- Separate HMI enclosure with swing arm, allowing ease of positioning to suit requirements
- New main enclosure including optional Ethernet
- Standardization on 4.5" (114mm) conveyor chain, compared to previous 3" and 6" chain versions
- One common frame to handle the full range of conveyor heights from 28" to 60" (710mm to 1525mm)
- New, simplified fallen bottle ejector integrated within the control system

The unit utilizes the same market-leading control system, incorporating a full color Touch Screen and Fully Guided Setup covering all mechanical and leak test settings. These features enable very quick setup/changeover and the ability to optimize test settings without requiring an expert operator.

The new machine will debut at Pack Expo 2013, where ALPS will be exhibiting in Booth #5915.
